

RIZO-LIQ CLOVER

Warning

1. Store in a cool (4-20°C), dark, dry place.
2. Do not use after expiry date.
3. Do not store near to pesticides.
4. Do not use for any other legume except as indicated.
5. Use immediately once the sachet has been opened.
6. Not harmful to humans and animals.

Although this remedy has been extensively tested under a large variety of conditions, the registration holder does not warrant that it will be efficacious under all conditions because the action and effect thereof may be affected by factors such as: abnormal climatic and storage conditions; quality of dilution water; compatibility with other substances not indicated on this label, as well as by the method, time and accuracy of application. Furthermore, the registration holder does not accept responsibility for damage to crops, vegetation, the environment, or harm to man or animal, or for lack of performance of the remedy concerned, due to failure of the user to follow the label instructions or to the occurrence of conditions which could not have been foreseen in terms of the registration. Consult the supplier in the event of any uncertainty.

Direction for use: Use only as indicated on this label.

Application method	Dosage / 100 kg of seed	Remarks
Seed Treatment Rizo-Liq Clover	800ml	Apply to the seed and mix thoroughly until it is evenly coated.
In-furrow Rizo-Liq Clover	400-500ml per hectare	Mix with water and apply in-furrow directly on the seed.

Note: Please ensure the seed is dry before planting starts. Use talcographite to enhance this internal.

PreMax Protector: We recommend the use of PreMax protector with the Rizo-Liq Clover inoculant which will help to increase bacterial survival on the seed or in the soil under most stress conditions. PreMix the PreMax Protector and the Rizo-Liq Clover inoculant and then add to the seed and mix thoroughly until it is evenly coated. Plant treated seed as soon as manageable.

Note: The seed quality, size, moisture content and germination percentage prior to treatment will affect the seed treatment load and consistency of the seed after treatment. Please ensure that seed quality has been tested prior to treatment. This product was tested on registered and certified seed, and recommendations are made accordingly to ensure quality in seed treatment performance and planting success, or if the time between mixing and planting needs to be shortened, follow the instructions recommended for the use of talc, and graphite to dry seed out. If the application of talc/graphite is not mentioned in planter recommendations, add as required to seed used is sufficiently dry.

Reg No: L 9400 Act No. 36 of 1947

OSMO PROTECTED INOCULANT

Bacterial legume Inoculant for effective nitrogen fixation on species of cloverlike: *Trifolium repens* (White Clover), *T. Subterranum* (Subterranean Clover), *T. Pratense* (Red Clover).

Active Ingredient: Live legume bacteria for clover (*Rhizobium leguminosarum biovar trifolii*) Minimum 2×10^9 live cfu/ml.
